

Day 1

COT

Scenario:

- Customer attempted to transfer ₹50,000.
- The transaction failed.
- Error displayed: "Transaction could not be completed."

Analyze the situation step by step and provide a concise reasoning summary

ICESPOT

1.Scenario: Search Functionality

I - Instruction

Generate comprehensive test cases for search functionality, covering missing aspects such as product type variations, filter/sort behavior, empty/invalid inputs, and performance considerations.

Generate 10-15 TestCases

C - Context

The application supports search across different domains (e-commerce products, hospital records, etc.). Current test coverage is incomplete — missing validation for product type differentiation, filter/sort options, handling of empty or invalid inputs, and performance under load.

E - Example

Code

TC_ID | TestCase | TestDescription | TestData | TestSteps | ExpectedResults | Status | Comment

Example:

TC_001 | Search with valid product | Verify search returns correct product results | "Laptop" | Enter "Laptop" in search bar and click search | Results should display relevant laptops | Pass | -

P - Persona

You are a senior QA automation engineer responsible for designing robust test cases for search functionality.

O - Output Format

Generate the Testcase in a downloadable csv file

T - Tone

Technical, precise, and professional — suitable for QA documentation and automation test design.

2. Scenario: Generate Test Cases for File Upload Functionality

I - Instruction

Generate 10–15 comprehensive test cases for the application's file upload functionality.

Ensure the test coverage explicitly that are currently missing

Prioritize positive, negative, boundary, security, and performance-related scenarios.

Each test case must contain clear, executable test steps and measurable expected results suitable for manual testing and automation.

C - Context

The application supports file uploads as part of its workflow. Existing test coverage is incomplete and does not adequately validate:

1. Supported and unsupported file types.
2. File size limits and boundary conditions.
3. Upload success and failure scenarios.
4. Security risks associated with malicious or manipulated files.
5. Invalid, corrupted, empty, duplicate, and specially named files.
6. Appropriate validation messages and system behavior.
7. Frontend and backend validation consistency.

E - Example

Code

TC_ID | TestCase | TestDescription | TestData | TestSteps | ExpectedResults | Status | Comment

Example:

TC_001 | Upload valid file | Verify that a valid file within the supported type and size limits can be uploaded successfully | test.pdf, 2 MB | 1. Open upload page 2. Select test.pdf 3. Click Upload | File is uploaded successfully, success message is displayed, and the uploaded file is available as expected | Not Executed | Positive test case

P - Persona

You are a Senior QA Automation Engineer responsible for designing robust, risk-based test cases for file upload functionality across UI and API layers.

Consider functional, negative, boundary, security, compatibility, usability, and performance aspects where applicable.

O - Output Format

Generate the test cases as a downloadable CSV file.

T - Tone

Technical, precise, structured, and professional — suitable for QA documentation, test-case management, and automation test design.

3. Scenario: Generate Test Cases for E-Commerce Cart Functionality

Instruction

Generate 10–15 comprehensive test cases for the shopping cart functionality of an e-commerce application.

The current test coverage is incomplete. Ensure the generated test cases explicitly cover the following missing areas:

1. Add to Cart
2. Remove from Cart

3. Update Cart Quantity
4. Price Calculation and Validation
5. Coupon and Discount Scenarios
6. Out-of-Stock and Inventory Handling
7. Cart Persistence and Session Handling
8. Negative, Boundary, and Edge Cases

Prioritize positive, negative, boundary-value, security, integration, and performance-related scenarios.

Context

The application is an e-commerce platform. Existing cart test coverage is incomplete, particularly for cart operations, price calculations, coupons, inventory, persistence, API validation, and security.

Example

text

TC_ID | TestCase | TestDescription | TestData | TestSteps | ExpectedResults | Status |

Persona

You are a Senior QA Automation Engineer responsible for designing robust, risk-based test cases for e-commerce shopping cart functionality.

The test cases should be suitable for manual testing, automation design, regression testing, and test-case management systems.

Output Format

The CSV must contain exactly these columns in this order:

text

TC_ID,TestCase,TestDescription,TestData,TestSteps,ExpectedResults,Status,Comment

T - Tone

Technical, precise, structured, and professional — suitable for QA documentation, test-case management, manual testing, automation test design, regression testing, and defect analysis.

Day 2

S06

The screenshot shows a REST client interface with a POST request to `https://api.groq.com/openai/v1/audio/transcriptions`. The request body is a JSON object with a `model` of `whisper-large-v3` and a `file` named `Meeting Recording.mp3.mpeg`. The response is a 200 OK status with a 1.12s duration and 1.19 KB of data. The response body is a JSON object with a `text` field containing a transcription of a meeting and an `x_groq` field with an `id`.

```
POST https://api.groq.com/openai/v1/audio/transcriptions

{
  "model": "whisper-large-v3",
  "file": "Meeting Recording.mp3.mpeg"
}
```

```
{
  "text": "Hari here, I'm going to run the daily stand up meeting today. We can get started. Morning Hari, morning Sindhu. Radhakrishnan here. So yesterday I've been assigned with a couple of tickets related to balance transfer. So I have written manual test cases initially for that and got it signed off from the BA and PD in our team, and since the latest build is now available in QA, I have started testing these scenarios and monitoring how the system behaves for the different scenarios. So far, the system is good and there are no any defects and if there are any, I will raise it accordingly and once the execution is done, I will focus on converting those steps into automation scripts and see how it goes. So that's the update from my side. Thanks. Thank you Radhakrishnan. Good morning everyone. Sindhu here. Yesterday I have completed smoke and regression testing for the payments module and log3 defects in Jira. And today I will be continuing manual testing for the reports module and automating the transaction history flow in Selenium, and there is no blockers so far and waiting for a new build to proceed with revalidation. So that's all for my update. Thank you. Okay. Thank you, Sindhu. Thank you, guys. Thanks for your update. Thanks, everyone. Thank you.",
  "x_groq": {
    "id": "req_Bikrtakeveribh1argf3xdheb"
  }
}
```

S09

The screenshot shows a REST client interface with a POST request to `https://api.groq.com/openai/v1/chat/completions`. The request body is a JSON object with a `content` field containing a list of messages. The response is a 200 OK status with a 541 ms duration and 1.45 KB of data. The response body is a JSON object with a `choices` field containing a list of chat completions.

```
POST https://api.groq.com/openai/v1/chat/completions

{
  "content": [
    {
      "type": "text",
      "text": "This is a image. Extract and return only the text exactly as shown, preserving case."
    },
    {
      "type": "image_url",
      "image_url": {
        "url": "data:image/png;base64,{{base64_img}}"
      }
    }
  ]
}
```

```
{
  "id": "chatcmpl-aa52a499-9d16-49d0-ad4e-6b3e33cdd05b",
  "object": "chat.completion",
  "created": 1786534643,
  "model": "qwen/qwen3.6-27b",
  "choices": [
    {
      "index": 0,
      "message": {
        "role": "assistant",
        "content": "\n<think>\n\nThe user wants the text from the image transcribed exactly.\n\n1. **Identify the main title:**\n2. **Identify the tagline:**\n3. **Transcribe:**\n\nTestleaf Always Ahead\n\n</think>\n\nTestleaf\n\nAlways Ahead"
      }
    }
  ]
}
```
